Organisation overview

Name: Renewed fitness

- **History of the organisation**

Renewed fitness is a newly established business, the company was founded in less than two years ago by a middle-aged couple. What started as a place where people can come in and lift weights has grown into something far more than that, classes and personal trainers were introduced to help existing clients with their health journey. Classes include; Swimming lessons, Boxing, Cardio and Pilates. To help the company increase its revenue, the gym recently opened a mini store to sell prepared meals and supplements to its clients.

- **Mission and vision statement**

The mission is to provide services that meet the needs of our members and those who wish to join Renewed Fitness and the vision goes far beyond the current Renewed Fitness facilities, building more facilities across the country to promote a healthy lifestyle across the vast majorities in our communities is the vision.

- **Target Audience**

Renewed Fitness facilities accommodate young athletes under the guidance of our staff members, beginners and professional athletes.

Website Goals and objectives

(i) Increased brand visibility:

A website gives an organisation a global reach. Having a huge number of people exposed to your product or services increases the probability of people who might be interested in acquiring what the business has to offer, having a website gives a business full control over what they want to show their potential clients what the business has to offer.

(ii) Low Advertising and Marketing costs:

Creating a website for a business helps the business owner(s) to promote their business without incurring extra costs, this is important for a startup that is still trying to increase their revenue. Online advertising reduces the costs of printing flyers and business cards to be handed out to the people.

(iii) Provide valuable information:

A website provides rich contact information of a business as well as the services rendered, a website can be used as a bridge of communication between potential clients and the business itself.

(iv) Credibility:

A well branded and structured website gives potential clients the confidence in the business because representation speaks to the professionalism of a business.

Key performance indicators to measure success:

- Number of people who visit the website per month
- Number of people who revisit the page per month
- Membership Sign-ups
- Feedback and reviews
- Search engine ranking
- Number of enquiries made through the website

Current website analysis

Strengths of the current website:

- The website details what the business offers concisely, people do not have to guess what services are being offered on the website.

Weaknesses of the current website:

- The website's home page has a list of classes the gym offers however every link you click takes you back to the top of the home page instead of the specific class the user is interested in.
- The about page does not speak to the history of the business nor does it speak to the mission and vision of the business. Every hyperlink on this page takes you to the top of the page instead of the desired destination.
- The classes page does not have hyperlinks for each class offered that will elaborate on the class and its schedule.

Areas of improvement:

- Fix all the hyperlinks on the 'homepage' to redirect the users to the desired destination.
- Add a bit of history on the 'about' page as well as the mission and vision of the business.
- Create functional hyperlinks on the 'classes' page that will elaborate on the selected class by the user.
- Pictures alone under 'gallery' are not sufficient to lure in potential clients, a snippet of how the gym looks in real time can enhance the interest of potential clients.

Proposed website features & functionality

(i) Homepage:

This will be the welcoming page; a snippet of how the gym looks like inside will be added.

(ii) About page:

To add the business' history, its mission and vision then introduce the team responsible for the business.

(iii) Classes:

To categorise every class offered at Renewed Fitness. Each class to have its own hyperlink that will further elaborate on what goes on during class and its schedule coupled with images and videos.

(iv) Pricing Plans:

To give potential clients sufficient details before deciding if the services rendered by the business are within their satisfactory price range.

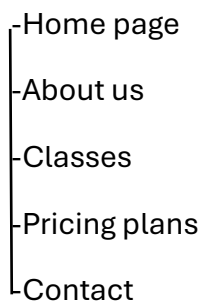

(v) Contact page:

To offer sufficient contact information including the business' address which will help the user get in touch with the business' representatives and enquire about anything they wish to know.

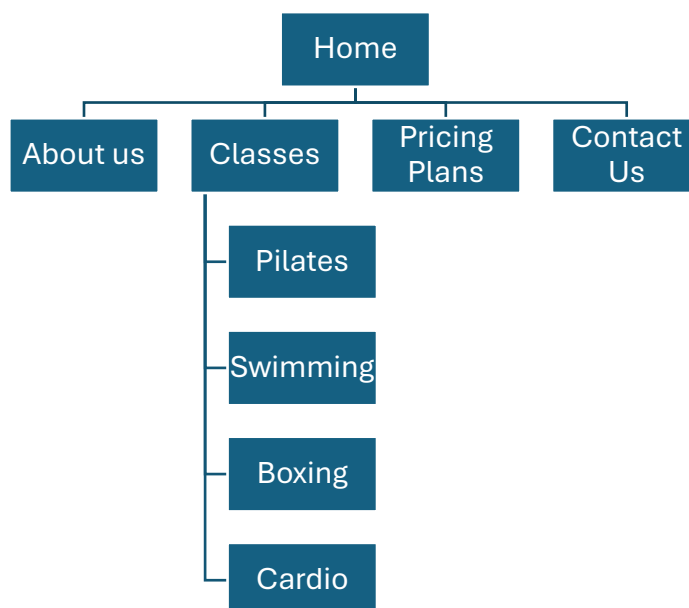

Design and User Experience

- The colours that I will use for this website are the same colours used for the gym's t-shirts which are red, black, white and a touch of grey.
- The website will use different fonts to distinguish headings, sub-headings and the body.
- A home page that will welcome the users with a fitness banner as well as a snippet of what the gym looks like.
- A responsive design that will be compatible for both desktop and mobile devices.
- A navigation bar at the top of each page to allow for quick access to every page available on the website.
- A visual hierarchy to ensure the user easily finds what they are looking for

Low-fidelity wireframes:

Hierarchy Chart:

Technical Requirements

- A Ryzen 5 computer with a windows operating system
- An IDE (Visual Studio) for scripting the html files

Hosting and Domain name

- A reliable hosting service such as AWS is required as it supports modern web technologies that ensure fast load times for media content such as videos and images.
- The domain name will use the gym's name and will be registered under a .co.za extension to emphasize local presents and trust.

Programming languages and Frameworks

- HTML will be used to structure the website
- CSS will be used to add style to the website
- JavaScript to add functionality to the website

Timeline and milestones

- Pictures and videos that will be used for the websites can be gathered in a space of a week together with the brief history of the business, the business's mission and vision.
- An additional week will be required to create files for the website then structure the website using HTML
- After the layout has been completed, style will be added to the website using CSS, to style the website will require an additional week
- Another week will be required to add live functionality to the website using JavaScript, both the styling and functionality will be added to enhance the user experience
- In total the project will take approximately 4 weeks to complete

Budget

Development:

- An upfront fee of R8 000 will be required for the development of the website. Development will include Structuring the website, adding style and functionality for user experience.

Hosting and Maintenance:

- A monthly fee of R500 is required for hosting and maintenance to ensure the accessibility of the website on the internet and to ensure the website constantly stays up to date, secured and functional.
